January 1st Dates

Database defaults to January 1st dates when SampleDate is unavailable or incorrectly collected from raw data. A SampleDate of January 1st is not necessarily an error, but a large number of January 1st dates should be examined further. Continuous WQ is excluded from this analysis.

A comparison is performed between the current export and the previous export. If the number (n) of values has changed or a difference in years is detected, the values in the *n* column or the *years* column will be highlighted in orange.

January 1st Dates

Database defaults to January 1st dates when SampleDate is unavailable or incorrectly collected from raw data. A SampleDate of January 1st is not necessarily an error, but a large number of January 1st dates should be examined further. Continuous WQ is excluded from this analysis.

A comparison is performed between the current export and the previous export. If the number (*n*) of values has changed or a difference in years is detected, the values in the *n* column or the *years* column will be highlighted in orange.
